ABOUT ME

Industrial Engineering graduate from Yildiz Technical University with a solid foundation in process optimization, data-driven decision-making, and digital transformation. Developed practical experience in workflow automation, predictive modeling, and AI integration through long-term corporate internships in enterprise SAP environments and complex analytical projects. Combines technical skills with project management, effective communication, and teamwork abilities gained through active roles in student organizations to contribute to scalable solutions that improve operational efficiency.

EDUCATION

- | | |
|---|-------------|
| • Prof. Dr. İlhan Kılıçözlü Fen Lisesi | 2016 - 2020 |
| • Yildiz Technical University - Industrial Engineering(English) | 2021 - 2026 |

LANGUAGE

- English B2

SKILLS

- Enterprise Systems & ERP:** SAP ABAP, SAP S/4HANA, OData, RESTful APIs, Batch Input (BDC), Debugging & Performance Tuning, ETL Data Flows
- Data Analytics & Machine Learning:** SQL, Python (Pandas, NumPy, Scikit-learn, XGBoost, LightGBM), SHAP, BERTopic (NLP), K-Means Clustering, Power BI, Excel
- AI & Automation:** Azure Document AI, Prompt Engineering, Process Automation, RPA Integration Support
- Operations & Tools:** Jira, Agile / Scrum, SDLC, Operations Research & Optimization, Lean / Kanban, Just-In-Time (JIT), Supply Chain & Production Planning

EXPERIENCE

- Tümkalıp Tekstil Makinaları ve Yedek Parça San. Tic. A.Ş. - Production Intern** Sept. 2024

Engaged in direct, hands-on spare parts manufacturing operations on the production floor to develop a comprehensive understanding of end-to-end component fabrication.

- Operated CNC machines for turning and milling operations in a spare parts manufacturing environment.
- Applied welding, vibration finishing, and countersinking processes on the production floor.
- Tracked part flow and managed shop-floor inventory using Kanban cards based on Just-In-Time (JIT) principles.
- Gained end-to-end operational visibility by observing cross-functional factory workflows from raw material intake to final product delivery.

- Migros Tic. A.Ş. - Human Resources Business Partner Intern** Oct. 2024 - February 2025

Supported corporate HR operations through routine data tracking, personnel reporting, and process analysis.

- Assisted in auditing and maintaining personnel datasets for 75,000+ employees using SAP and Excel to support data consistency.
- Prepared routine HR tracking reports and presentations to support team decision-making.
- Researched international corporate HR trends and benchmarks to identify operational best practices.
- Attended internal operational meetings to track organizational metrics and learn corporate business workflows.

- Migros Tic. A.Ş. - System Development Intern** March 2025 - Present

Contributed to digital transformation initiatives within the SAP-ABAP ecosystem using SQL data logic. Focused on building data-driven solutions to enhance operational efficiency and visibility.

- Engineered structured ALV performance reports and optimized SQL data structures to build custom KPI logic across 75,000+ employee records.
- Automated high-volume recurring data processing and reporting using Batch Input (BDC) methodologies to reduce manual workload.
- Developed RESTful APIs using OData protocol to integrate SAP data with Fiori interfaces and RPA bots.
- Documented OData endpoints and request payloads to guide front-end developers during Fiori integration.
- Trained custom Azure Document AI models and designed Prompt Engineering workflows to automate document verification.
- Conducted deep-dive debugging and SQL performance tuning to eliminate bottlenecks and support ETL data integrations.
- Collaborated with cross-functional teams to manage development tickets, effort estimations, and release tracking aligned with Agile/SDLC workflows.

PROJECTS

- **Graduation Project: Data-Driven Employee Retention & Optimization System** February 2026 - June 2026
 - Extracted and integrated datasets from 7 different SAP tables for 9,000+ employees and 3,000+ stores, performing data cleaning, outlier handling, and text data preprocessing.
 - Developed operational metrics, such as workload per square meter and employee-manager alignment, based on industrial engineering and management theories to prepare data for predictive modeling.
 - Built and compared Decision Tree, Logistic Regression, Random Forest, LightGBM, and XGBoost models for 90 day employee churn prediction, achieving 88% recall with the final XGBoost model.
 - Utilized SHAP analysis to pinpoint the root causes of turnover at both global and individual levels, breaking down model decisions into actionable insights.
 - Applied K-Means clustering to segment stores by operational conditions and used NLP (BERTopic) to analyze exit surveys, cross-validating survey feedback with model insights.
 - Designed and implemented a constraint-based recommendation algorithm to safely relocate at-risk current employees and optimize new hire placements based on store capacities and distance metrics.

VOLUNTEER WORKS

- KvK School Club - Team Member 2021 - 2023
- BEST 2022 - 2024

CERTIFICATES

- Code The Future (BadiWorks)
- Foundations of Project Management (Google)
- LAUNCHER - Learn About the Universe 'Nd its Conquest by Humanity Employing Rockets (ENSTA - Paris)
- İlerisi Gençlik Eğitim Programı (DenizBank)
